

Regional Water Conservation Program for Businesses

Tuolumne Utilities District is partnering with the Tuolumne County Resource Conservation District to offer a Regional Water Conservation Program to all Tuolumne County businesses.

Low Flow Toilet Application or Pre-Rinse Sprayer

If you have a Tuolumne County business, you may be able to be reimbursed if you have recently purchased a low flow toilet.

- If you install low-flow WaterSense toilets at your business, you may receive up to **70% off the purchase price of your toilets**. One application per business location. **The toilet must be a WaterSense product.**
- **Have a restaurant?** There is funding available to reimburse you if you install a pre-rinse sprayer in your kitchen. A pre-rinse faucet with sprayer is perfect for rinsing excess food and sauces from your dishes prior to running them through your commercial dish machine. And this will save water and money. Receive a reimbursement of **70% of the purchase price of the pre-rinse sprayer**.
- The program is applicable to all receipts dated as of January 1, 2017 that have not already participated in a rebate program.
- All applicants must complete the information below and attach all receipts to the application in order to receive a rebate. Mail your completed application to the address listed below.
- Complete the information below. Once completed and submitted, a check will be mailed from Tuolumne Utilities District to the address listed on the form within 60 days.
- This program is available through grant funding and may end once funding sources are exhausted.
- **For Twain Harte Community Services District customers**, apply directly at <https://www.twainhartecsd.com/>

How Much Water Does a Low-Flow Toilet Save?

LOW FLOW TOILETS

The toilet is the single biggest water user in your home. Flushing accounts for about one-third of the water used within your home each day.

Replacing an old model toilet with a new low-consumption toilet could automatically and permanently cut your home water consumption by 25% or more. Saving water will help you save money!

LOOK FOR THE WATERSENSE® LABEL

Unlike some first-generation, "low-flow" toilets, **WaterSense®** labeled toilets combine high efficiency with high performance. Design advances enable WaterSense labeled toilets to save water with no trade-off in flushing power. Whether remodeling a bathroom, or simply replacing an old, leaky toilet that is wasting money and water, installing a WaterSense® labeled toilet is a high-performance, water-efficient option worth considering. If every American home with older, inefficient toilets replaced them with new WaterSense labeled toilets, we would save nearly 640 billion gallons of water per year, equal to more than two weeks of flow over Niagara Falls!

For more information or a list of WaterSense labeled products, visit www.epa.gov/watersense.
